1" (25mm) - 1 each 50, 80, 120, 200 grit

Applications:

Specialty Diamond DGBMASTER includes 19 diamond grinding bits. This set is the most versatile and affordable combination of diamond grinding bits available. Always have the correct bit size and grit at your fingertips.

Specialty Diamond grinding bits are designed for use on popular diamond grinders and mills to perform stock removal, shaping, profiling and hole drilling applications in tile, glass, stained glass, stone and other hard materials.

Features:

Specialty Diamond grinding bits are manufactured using high purity brass and lathed unibody design to resist fatigue cracks caused by high RPM and vibration. Advanced metallurgical bonding procedures allow multiple embed layers of diamond substrate for longer wear life and finish consistency resulting in uniform grinding profile and long life. Highly uniform diamond bedding prevents chipping when working delicate materials.

Design & Compatibility:

These grinding bits use universal arbor and set screw design and are capable of pairing with all 0.312" (7.92mm) spindles including ALL INLAND GRINDERS. These are available in 50 (excluding 1/8"), 80, 120 and 200 grit variations and in sizes 1/8" (3mm), 1/4" (6mm), 3/8" (9mm), 3/4" (19mm) and 1" (25mm). They are also compatible with WIZ, SUPER WIZ, WIZLING CG, WIZARD IV, IMPULSE, WIZ CG AND MORE. Please beware of your particular grinder's ability to support bits of 1" in diameter prior to purchasing 1" grinding bits.
